

Applied Sciences:

Master's studies "Psychology"

The master's program "Psychology" is unique because it is based on a multidisciplinary approach. Students will gain a broad knowledge of different areas of psychology, as well as an interdisciplinary perspective that will enable them to understand complex aspects of the human mind and behavior. Courses cover various areas of psychology, including human development and education, community psychology, cognitive psychology, communication psychology, psychology of cyberspace and new identities, and many others.

One of the key strengths of the program is research studies. Through research projects, students will have the opportunity to apply the acquired knowledge and develop research skills. Renowned lecturers from the region and the world will support students in their research interests and mentor them throughout the process.
